ABOUT US

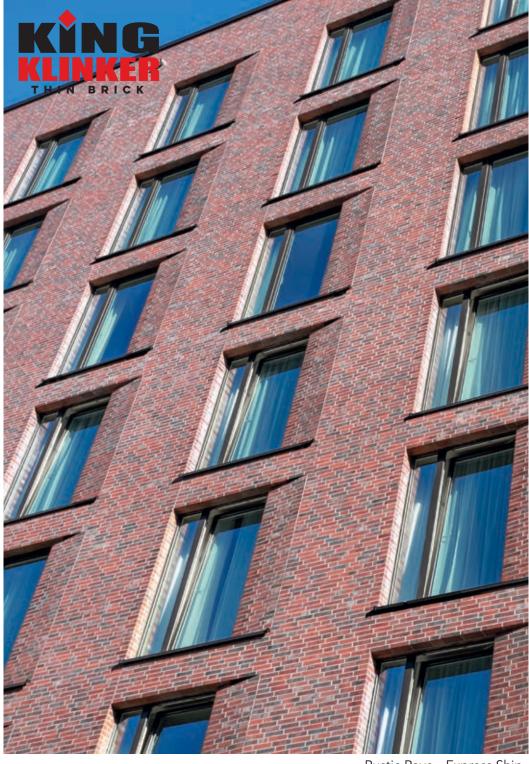

The King Klinker story is one of freedom of enterprise and a strong Polish heart determined not just to survive, but to be the best. The founders established its roots as a ceramic and glazing company named, Klinkier Przysucha, during a time when the Soviets had control of Poland post WWII. Then in 1987, after the fall of the Soviet Iron Curtain as President Ronald Reagan challenged Soviet leader Mikhail Gorbachev to "tear down this wall", Klinkier Przysucha was positioned for private sale. As a free country, it took many years for Poland to sell off all the state-owned companies. However, in 2004, private investors purchased the struggling factory and made plans to form a massive thin brick plant.

In 2013, King Klinker built the most sophisticated thin brick plant in the world with Siemens controls and the latest German machinery. Polish engineers also added their own twist to the high level of sophistication by creating trade secret machines for making some of the best collections of thin brick in the world.

Today King Klinker is growing fast and adapting to markets around the globe. With high quality clay and the best manufacturing methods, King Klinker thin brick far exceeds some of the most stringent tests such as the PCI tolerance and pullout tests in the USA. King Klinker has been bold in creating new sizes for the American market such as modular, norman and american imperial.

MASTER DISTRIBUTOR ALLIANCE

King Klinker has partnered with Advanced Formliners for precast and tilt-up and Speedymason for stud wall and post-applied application. The King Klinker thin brick is sold in collaboration with these systems through master distributors thoroughout the United States and Canada.

THIN BRICKS

King Klinker of the Americas partners with thin brick distributors in the United States and Canada to provide thin brick for stunning architectural design that leaves a lasting legacy of distinction, caliber and craftmenship. King Klinker thin brick astounds the eye with it's unique colors, textures and sizes including the long ultra premium length. King Klinker delivers on results achieving and exceeding all testing standards. King Klinker thin brick will amaze with it's timeless elegance for generations.

WHAT MAKES US UNIQUE?

In 2013, King Klinker built the most sophisticated thin brick plant in the world with Siemens controls and the latest German machinery. Polish engineers also added their own twist to the high level of sophistication by creating trade secret machines for making some of the best collections of thin brick in the world.

- Brick Manufactured for Precast
- 20" Thin Brick
- In Line Glazing
- Stock of Each Color
- Express Ship Have your order within a week
- Amazing Color and Texture Options
- Chameleon Blending Tools and BIM Support

ULTRA PREMIUM COLLECTION

The Ultra Premium collection is vertically extruded featuring quasi glazing in some colors and manufactured in Modular, Norman, King, European Imperial and American Imperial sizes.

SPEEDYMASON ULTRA-SPEED THIN BRICK SYSTEM

The Ultra-Speed Thin Brick System combines the ease of the Speedymason Brick Lath Panel with the Ultra Speed King Klinker thin brick. This **mortarless** method eliminates the need for grouting and striking on interior, exterior, residential or commercial.

3. Place Brick

2. Apply Mortar

SPEEDYMASON ULTRA-SPEED THIN BRICK SYSTEM

www.speedymason.com

SPEEDYMASON BRICK LATH SYSTEM

Speedymason Brick Lath allows a full set of thinset mortar between the panel and the thin brick and also includes **guides** to show where to place the thin brick for easy installation.

This system has the integrity of the tradition method but **saves time and labor costs**.

1. Attach Panel

3. Place Brick

2. Apply Mortar

4. Grout and Strike

SPEEDYMASON BRICK LATH SYSTEM

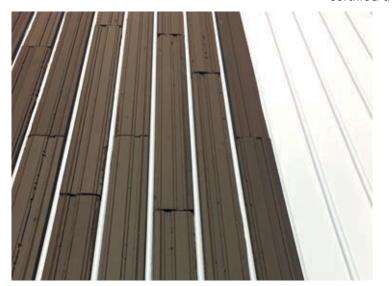

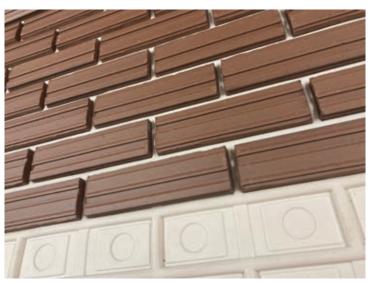

INSTALLATION METHODS

PRECAST AND TILT-UP CONCRETE

Install waxed King Klinker thin bricks face down into a form liner to make a specific pattern in a casting bed. This method is used in Tilt-up Concrete construction as well as Precast Plants. This affordable but high-end method provides a fantastic building envelope that will last for centuries. King Klinker thin brick is manufactured to TCX grade and tested to **exceed PCI compliance**. Please contact us for precast information.

Flex2Fit formliners give architects the flexibility to choose brick that is not uniform in size, shape or texture. The formliner seals around the brick better than plastic and is easy to use. It works well with PCI certified and non-PCI certified thin brick.

King Klinker has many colors in stock ready to be waxed and shipped.

PCI Freeze/Thaw Pullout

King Klinker thin brick exceeded the freeze/thaw tests by at least 27%. Freeze/thaw cycles have little effect on King Klinker thin brick. King Klinker passed for all clay body colors.

Water Absorption

King Klinker thin brick has a water absorption of ~3%, just enough water absorption for perfect bonding yet not too much for maximum integrity of the clay body.

Efflorescense

King Klinker thin brick has no chalky white efflorescense usually caused by impurities in the clay.

Warpage

All King Klinker thin brick sizes meets the warpage standard of TBX.

Size

King Klinker thin brick meet TBX tolerance for all sizes. Modular and Norman meet PCI dimensional standards for precast projects.

Chemical Resistance

King Klinker thin brick is not affected by acidic cleaning agents (Hydrochloric acid 3%, Citric acid 10%, Potassium hydroxide 3%)

Brick Back Structure

King Klinker thin brick can be made with a keybacked structure or a ribbed-backed structure.

BRICK BACK STRUCTURE

BRICK BACK STRUCTURES BY COLLECTION

	Ultra Premium	Traditional	Glazed
Scored	King, 5x10 Tile, Euro Imperial		King, 5x10 Tile, Euro Imperial
Key Backed	Modular, Norman, American Imperial		Modular, Norman, American Imperial
Ribbed		Modular and King Size	

Due to the printing technique, the actual color of the thin bricks may slightly differ from those shown in the pictures.

Due to the natural properties of clay and the production process, there may be differences in the product's color shades. In order to minimize color differences, it is recommended to purchase thin bricks from the same production batch. Mixing thin bricks from several boxes is a prerequisite for achieving an optimal aesthetic effect similar to the design shown in the advertising materials.
