WHAT IS TIER®?

TIER® is a sophisticated stone paneling system designed for a distinctive, natural stone finish. These panels interlock seamlessly, enabling easy installation without specialized labor. Crafted from carefully selected stones like limestone and granite, TIER® combines the timeless beauty and durability of stone with the ease of thin veneers.

Each product undergoes rigorous quality control to ensure a stunning finish, reflecting a commitment to aesthetic and structural excellence. TIER® also provides mechanically fastened natural stone systems that enhance installation efficiency and structural integrity for both interior and exterior applications.

By merging traditional craftsmanship with modern innovation, TIER® preserves the elegance of stone while expanding its usability across diverse building projects. TIER® is versatile, high-quality, natural stone solutions.

WHY USE TIER®?

Authentic

As TIER® is made from natural stone, it bears all the form and character of a dry-stone wall. The simple yet clever shape of TIER® Panel Systems allows each section to interlock seamlessly together producing all the charm and elegance of a hand crafted natural stone wall.

Quality

TIER® stands out due to its design by a professional stone mason and the use of high-quality natural stones. Each stone is meticulously selected and dressed, ensuring that no two panels are identical. This focus on quality materials and detail results in a unique, timeless, and elegant finish.

Versatile

The applications for TIER® are endless. Its simple installation means it can be incorporated into both commercial and residential environments, adding beauty to either an entire structure or a small feature.

Efficient

The panelized design greatly reduces installation time. With TIER®, it is possible to install up to 300 sq/ft per day. This compares with 32 sq/ft for random sized stone applied by a mason.

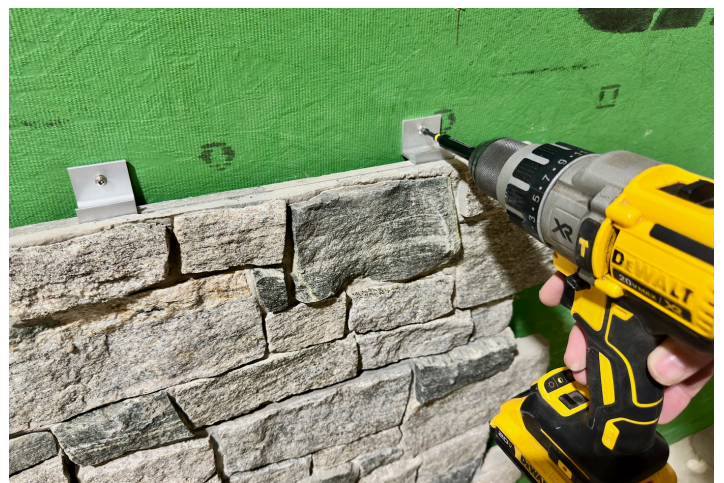

Simple

This panel system has been designed to achieve the look of a professionally installed stone wall with alternate labour requirements. No specialized skills are required to install TIER®, which is why it is popular with contractors and developers alike.

Economical

As well as reduced labour costs, TIER® has the advantage of producing less waste during construction. Whilst traditional masonry can have up to 25% wastage, TIER® has virtually none.

ULTRA

Panel System

The TIER® ULTRA Panel System features our exclusive Plus Panel shape design, engineered to eliminate visible vertical and horizontal joints for a seamless, natural stone finish. Once installed, it delivers the authentic look of full-depth masonry—without the weight or complexity. Designed for flexibility, the ULTRA System can be installed without mortar using aluminum clips, making it a faster, cleaner solution for both residential and commercial facades.

ULTRA

Panel System

Key Features:

- Mechanically Fastened Natural Stone.
- No mortar required.
- Shape eliminates horizontal and vertical lines.
- No onsite cutting required for clips.
- Installation is 8-10x faster than loose stone.
- Provides a 1/2" rain screen for water drainage and wall ventilation.

NOVA

Panel System

The TIER® NOVA Panel System uses a classic Z-panel format, offering a straightforward, easy-to-install solution that delivers the look and feel of real stone. While horizontal joint lines remain visible, the interlocking design ensures a tight, consistent fit across the surface. Like the ULTRA System, NOVA is installed without mortar using aluminum clips—providing a clean, efficient alternative to traditional stone masonry.

ASSOCIATED PRODUCTS

TIER® WATERTABLE SILLS

TIER® Watertable Sills are the perfect finishing element for transitions between materials like siding, brick and stone. Designed with a built-in drip edge, they help direct water away from the wall to protect against staining and moisture intrusion.

Whether used for aesthetic breaks or functional detailing, our watertable sills add both performance and polish to any facade.

TIER® MASONRY TEXTURED SEALANT

TIER® MTS – Masonry Textured Sealant is designed to seamlessly fill small gaps that can appear between panels when installing our TIER® ULTRA and NOVA systems with mechanical clips. Natural stone varies in shape and texture, therefore minor spacing is inevitable during installation.

MTS blends in like a mortar joint, maintaining a natural, masonry-like finish while ensuring a clean, professional result.
